Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 14-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ambasz (Canadian patent 2,316,368) in view of Hansen.

Ambasz teaches a stackable chair comprising a frame that includes legs and a pair of spaced-apart back supports, an armrest support, an armrest mounted on the armrest support such that the armrest is pivotal and biased to a use position substantially as claimed except for the armrest being simultaneously translational.

The patent to Hansen teaches an armrest movable in a simultaneous pivotal and translational manner including a pivot pin 18 a slot 21, and a control slot 12 to be old and well known in the art. It would have been obvious to one of ordinary skill in the art to modify the Ambasz device such that it had both pivotal and translational movement

as taught to be old by Hansen thereby providing the obvious advantage of facilitating chair stacking.

Claims 1-13 are allowed.

Claims 18 and 19 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art fails to teach a stackable chair including, inter alia, a tiltable backrest including a rigid coupling member having a lower portion received within an upper end portion of the respective back support and pivotally joined to the respective back support and having an upper portion received within and affixed to a socket in the backrest and in that each mount unit further includes a compression spring received within the upper end portion of the back support and engaged between the lower portion of the coupling member and a front wall of the respective back support so as to bias the backrest to the upright position as specifically claimed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wolfe, McDonald, Jr., Schlosstein, Fismen, Cao, Bergsten et al., and Piretti all teach devices similar to that of the instant invention.
